

Smerud provides the intimate collaboration required in early trials to achieve agreed milestones.

Dedication to projects and a clear vision of professional pride make us important providers of clinical development in Europe.

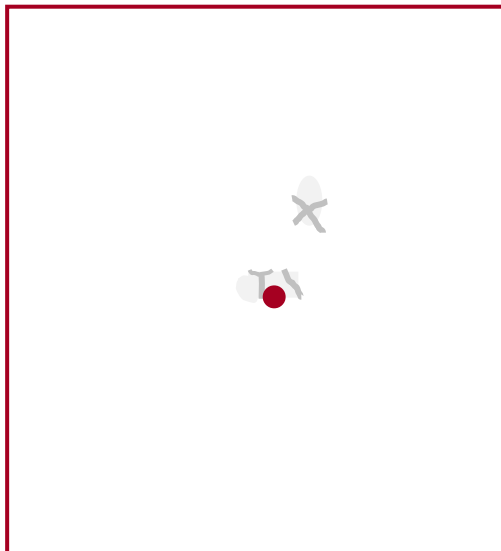

Location: Manchester Science Park

Our project managers have been carefully selected and trained to understand the quality and result-oriented environment in today's contracting market.

Our full service organisation offers all operational services needed to develop a drug: from first-in-patients, until compiling the application for marketing authorisation.

SMERUD

Medical Research

EXPERTS IN
PROOF-OF-CONCEPT
CLINICAL TRIALS
AND
CLINICAL DEVELOPMENT

Smerud Medical Research is a clinical contract research organisation (CRO) operating in Europe.

Our UK office is based in Manchester, supported by our headquarters in Norway. Other subsidiary locations include Sweden, Denmark, Finland, Poland and Russia.

Office: our home in Manchester

SERVICES

- CLINICAL PROJECT MANAGEMENT
- MONITORING OF PHASE II-III STUDIES
- REGULATORY AFFAIRS
- CLINICAL DEVELOPMENT PLANS
- DATA MANAGEMENT
- BIostatISTICS
- MEDICAL WRITING

Experienced

Since launching in 1993, Smerud has been involved in more than 600 clinical trials and 300 regulatory projects, in addition to over 100 projects concerned with data management, biostatistics and medical writing.

Smerud's knowledge base also includes innovative study designs, aimed at exploiting often relatively scarce funding for early phase trials – especially through start-up biotech companies.

International

Furthermore, our core international management team in Oslo features senior professionals with many years of experience in all areas of clinical research for the pharmaceutical, academic and consultancy industry.

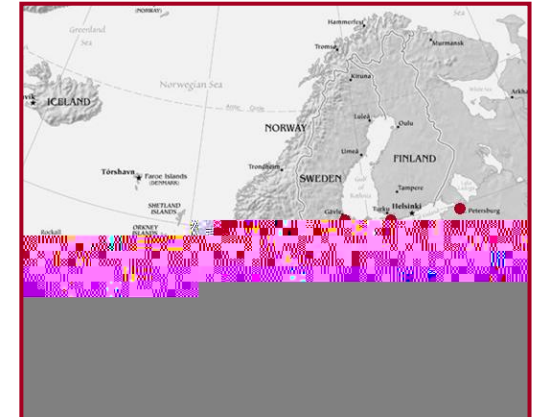

Biotech specialists

Smerud is ideally sized and experienced as a preferred partner to biotech companies, as it is able to manage early clinical trials in a cost-effective setting.

Our core competencies are expert consulting and operational services: from clinical proof-of-concept trials (phase IIa) up to pivotal phase III trials.

Being a small company and operating in transparent markets, Smerud has maintained a client-focused and flexible attitude.

We have found this to be particularly important in managing biotech clients, as many such clients wish to keep very close control over study progress.
